GROUP PROJECT REPORT

PHASE 1: BRAINSTORMING & IDEATION PHASE

Project: Auto Ticket Classification using Flow Designer

1. Problem Identification

The school IT helpdesk receives multiple incident requests daily from students and teachers. The project document identifies common issues such as Wi-Fi problems, projector failures, password problems, and slow computers.

2. Existing Problem

IT staff currently review each request manually and assign a category. The manual process is time-consuming, error-prone, and not scalable as the number of requests increases.

3. Proposed Project Idea

The proposed solution is to automate ticket classification using ServiceNow Flow Designer. The system analyzes keywords in the incident short description and description fields and assigns the appropriate category and subcategory.

4. Project Objectives

- Automatically classify incidents at the time of creation.
- Reduce manual effort for IT agents.
- Improve ticket routing efficiency.
- Implement a no-code and easily maintainable solution.
