GROUP PROJECT REPORT

PHASE 4: PROJECT PLANNING PHASE

Project: Auto Ticket Classification using Flow Designer

1. Update Set Creation

A ServiceNow Local Update Set named Project Update Set is created to manage the project configuration.

2. Update Set Configuration

- Navigate to All menus → System Update Sets → Local Update Sets.
- Click New.
- Name: Project Update Set.
- State: In progress.
- Application: Global.
- Save the form.
- Use the Related Links option Make This My Current Set.

3. Planned Project Activities

- Requirement analysis and business use case definition.
- Custom table creation.
- Field creation and data type configuration.
- Category and Subcategory dependency configuration.
- Flow Designer automation.
- Email notification setup.
- Testing and validation.
- Deployment and final documentation.

4. Planning Outcome

The project is organized as a phased ServiceNow implementation so that configuration, automation, testing, and deployment can be completed in a structured manner.
