GROUP PROJECT REPORT

PHASE 6: PROJECT TESTING PHASE

Project: Auto Ticket Classification using Flow Designer

1. Testing, Validation & Security

The project testing phase verifies that the developed solution works as expected, meets functional requirements, validates end-to-end automation, confirms data accuracy, and checks basic security and access-control practices.

2. Data Validation Checks

- Mandatory fields are captured correctly.
- Auto-number is generated without duplication.
- Category and Subcategory values are stored accurately.
- Reference fields resolve correctly to user and group tables.

3. Test Scenario 1 – Wi-Fi Issue

- Caller Name: Enter a caller.
- Short Description: WiFi not working in library.
- Expected Category: Network.
- Expected Subcategory: WiFi.
- Email is sent to the caller email ID.

4. Test Scenario 2 – Projector Issue

- Caller Name: Enter a caller.
- Short Description: Projector not turning on.
- Expected Category: Hardware.
- Expected Subcategory: Projector.
- Email is sent to the caller email ID.

5. Email Notification Testing

- Open All menus → Emails.
- Under System Logs, select Emails.
- Search using the given subject name.
- Open the email record and select Preview mail.
