GROUP PROJECT REPORT

PHASE 7: PROJECT DOCUMENTATION PHASE

Project: Auto Ticket Classification using Flow Designer

1. Deployment and Final Documentation

The project document describes deployment and final documentation as the stage in which the solution is made stable, reusable, ready for demonstration or production use, and documented for future reference.

2. Make Update Set Complete

- Go to All menus → System Update Sets → Local Update Sets.
- Open the Project Update Set.
- Change State from In progress to Complete.
- Save the form.

3. Export Update Set

- Under Related Links, select Export to XML.
- The Update Set data is downloaded in XML format.
- The downloaded XML file can be shared through WhatsApp or email.

4. Final Project Documentation

- Problem statement.
- Project objectives.
- Business requirements.
- Custom table and field configuration.
- Category and Subcategory dependency.
- Flow Designer automation.
- Email notification.
- Testing and validation.
- Deployment procedure.
- Project conclusion.

5. Conclusion

The project provides an end-to-end automation solution for a school IT helpdesk. It automatically classifies IT tickets based on the short description, uses dependent choice fields for data accuracy, and sends automated email notifications to callers. The project is implemented using a phased, no-code Flow Designer approach and can be extended in the future with assignment automation, SLA tracking, or predictive intelligence.
